DATA CENTER & NETWORK INFRASTRUCTURE FOR SOUTHEAST MARKETS

DATA'S ON-RAMP IN HUNTSVILLE

DC BLOX

Connected Data Centers

Colocation data centers have served an important role historically in housing IT infrastructure where company-owned facilities are not available, not reliable, too costly, or do not have enough capacity. However, today's network-enabled data centers provide much greater value than simply space, power, and Internet, especially in edge cities. IT infrastructure is becoming increasingly distributed driving the need for resilient, flexible and high-performance networks to connect to all the providers, platforms and partners that make up your business's evolving IT ecosystem. It is time to stop trying to bring the network to your IT infrastructure, take your infrastructure to the network!

DC BLOX's Southeastern regional data centers, private network and connectivity ecosystem provide the core infrastructure that can meet a myriad of business needs. A few of the most popular uses of DC BLOX's connected data centers include Hybrid IT, Disaster Recovery, and local Cloud Storage. For businesses in Huntsville, Alabama, DC BLOX is your data's on-ramp to reach any global destination.
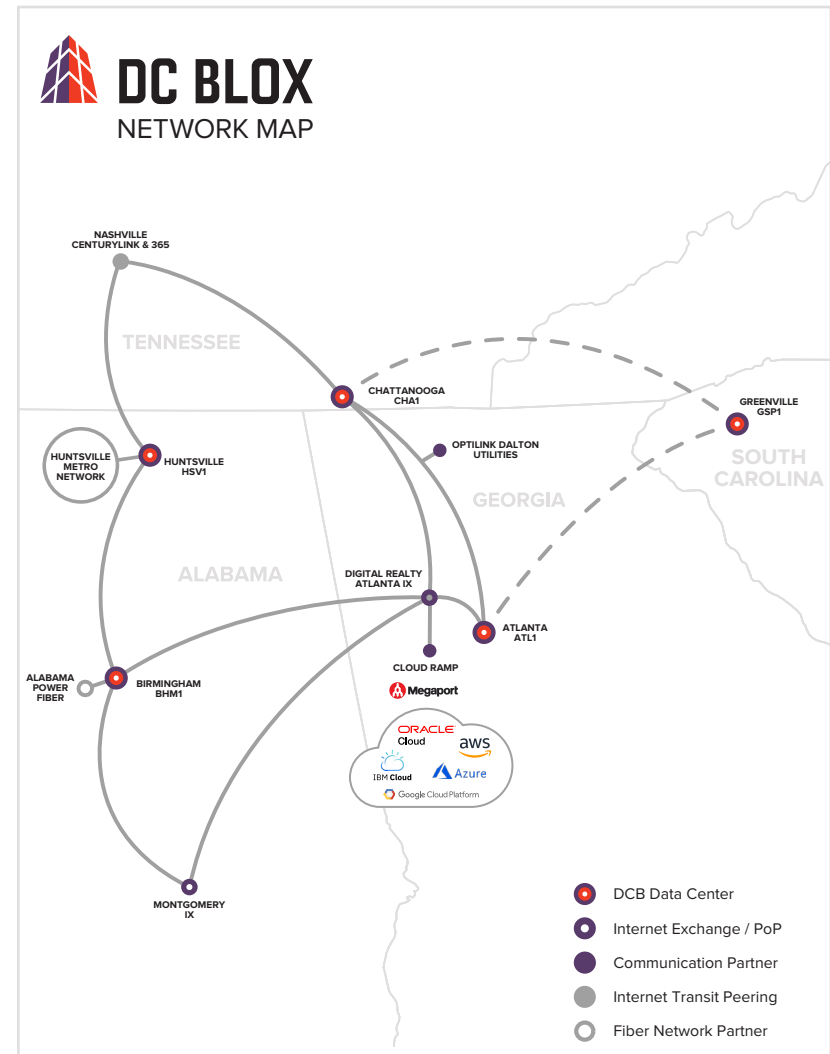

Built for Resiliency

DC BLOX network and connectivity services enable you to reach all the partners, providers and platforms needed to achieve your business's digital transformation goals. With a private, high-speed network fabric connecting all its data centers, DC BLOX can sit at the core of your business's digital infrastructure to ensure you are ready for the challenge.

- ◢ Carrier Neutral

- ◢ Private optical network across Southeast US

- ◢ Virtual cross-connects to carriers in any DC BLOX data center

- ◢ Low-latency to Internet Exchanges — hundreds of carrier connections

- ◢ Private connectivity to Cloud Providers

- ◢ Software-defined network for rapid provisioning

Last-Mile Connectivity in Huntsville

DC BLOX has built a metro fiber network in Huntsville that enables resilient, low-latency, high-capacity, last-mile access from many business locations to the DC BLOX Southeast regional network and all our connected data centers. Imagine the opportunity to leverage up to a 100Gbps connection to facilitate connectivity to infrastructure running in our colocation space, enable access to multiple public cloud providers, migrate data to a massive distributed object storage platform, or synchronize with redundant infrastructure for business continuity.
