

Hybrid IT Solution

With more and more workloads moving to the public cloud and with the need for maintaining some infrastructure on the premises, many IT organizations are planning a hybrid IT strategy. However, companies are struggling with how best to connect those premises-based systems to the cloud and ensure the flexibility to support multiple clouds.

Most IT teams don't want to utilize the public Internet for performance and security reasons. However, it can be costly and complex to get connectivity configured through your local providers.

Moving your premises-based IT infrastructure to a DC BLOX data center gives you instant access to all the major public cloud providers including Amazon Web Services, Microsoft Azure, Google Cloud, IBM and more. Our [Cloud Ramp](#) solution leverages our private network and partner Megaport to rapidly establish new connections and includes the following features:

- Private, end-to-end connections ensure low-latency performance and security
- Scalable speeds from 50 Mbps to 10 Gbps
- Rapid provisioning in minutes or hours, rather than days or weeks
- Turnkey solution with simple monthly pricing
- Add new cloud providers as needed

Give us a call to see how partnering with DC BLOX can become an important part of your digital IT strategy.
